

## BusinessGenetics for SAP Better Together

- 93% of all ERP implementations take longer than expected
- 59% of ERP implementations cost more than initially assumed
- Only 13% characterize themselves as “very satisfied” with their implementation

\* Panama Consulting Group 2008

The BusinessGenetics SAP® Solution Suite generates business-centric process modeling support for your SAP® installation, upgrade or maintenance projects and monitoring support for your installed SAP® Solution.

### The Advantages of BusinessGenetics and SAP® – Together

- Reduced project time and cost by aligning the business with IT and SAP®
  - Transparency across requirements definition, blue printing, implementation and testing
  - Customized Process-driven configuration and on-going support
  - Reusable process libraries for additional business improvement projects
- Strong analysis and reporting capabilities
  - Requirements reporting for user training, testing and rollout

### BusinessGenetics for SAP® Blueprint

BusinessGenetics for SAP® Blueprint addresses the Blueprint Phase of SAP® installations, upgrades or maintenance projects. BusinessGenetics downloads SAP® Solution Manager Scenarios, Processes and Process Steps or SAP® Business Process Repository templates then works with your team to update them for your business processes. The result, an SAP® Solution Manager with a robust set of business processes that drive solid process-driven configuration.

BusinessGenetics’ provides the universal language that enables all stakeholders to increase their project velocity through clear, consistent and simple understanding of your business’ processes. We model your whole business so you can clearly see where SAP® will best support it, and highlights where to focus on alternatives for the gaps.

### BusinessGenetics for SAP® Blueprint also provides:

- Business Requirements Documents
- ASAP Business Process and Design Documents
- Functional Specifications for Enhancements, Interfaces and Conversions

This robust suite of reports is designed to support and enable SAP® implementations through the automatic generation of accurate, systematic and consistent business requirements from BusinessGenetics models for:

- Automation
- Security
- Data
- Reporting and Forms
- Workflow
- Performance

# BusinessGenetics®

## BusinessGenetics for SAP® Profiling:

BusinessGenetics for SAP® Profiling provides up-to-date, automatically generated information to support System Standardization Analysis, Compliance/Governance - Risk Analysis, Process Optimization, Upgrade Analysis and Implementation Support.

An SAP® Solution once installed must be monitored to ensure effective and efficient operations and to guarantee that transactions are being used in line with compliance regulations. BusinessGenetics' monitoring software produces reports from both SAP® Solution Manager and/or the Solution itself showing transaction usage by type, volume, SAP® module and authorizations.

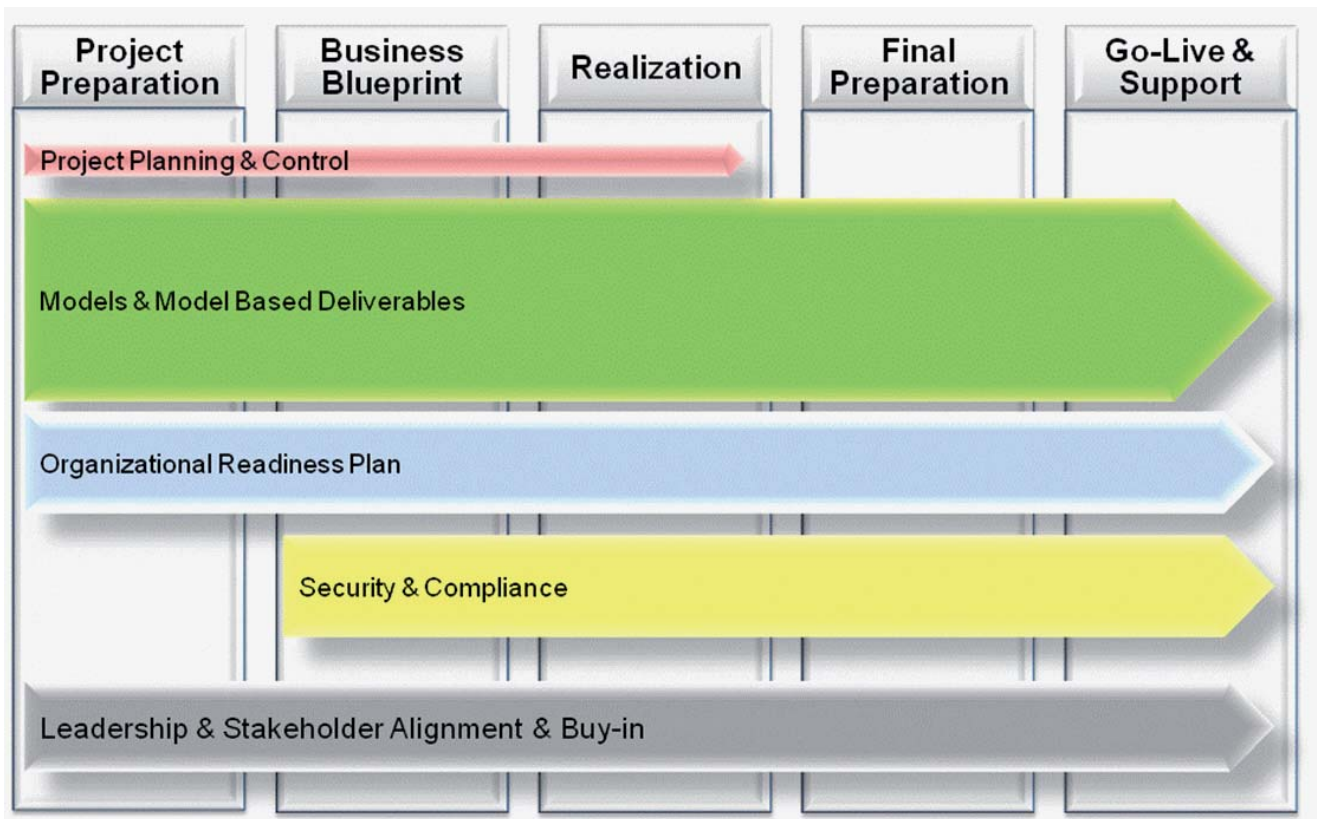

By understanding transaction usage reduces project time and costs. Ongoing authorization monitoring provides information to correct any segregation of duty issues in a timely manner, reducing audit points for compliance.

**You won't find a more business friendly, easy to use set of tools and methodology in the market, just ask the analysts...**

### Profiler Report:

- 835 total customized transactions with 234 unused transactions
- 3790 total customized reports with 436 unused reports
- Eliminate up to 50% of unused transactions and reports
- Assume 2 days of effort to test and upgrade transaction and 1 day per report (assuming low offshore costs at \$480 per day)

**(234\*2 + 436) \* \$480 = \$434,000  
Cost Savings**
